INNOVATIVE FRAMEWORK FOR AN ADAPTABLE CAREER GUIDANCE PROCESS.

MODULES

- Formalization of the career guidance process goals and outcomes in terms of educational directions / specializations / occupations taking account of existing vocations classifications, occupational standards, federal state educational standards of special and higher education (regulatory framework);

- Catalogue of criteria and indices for qualitative evaluation of dynamics of personal orientation on an occupation in the system “school – tertiary institution – labor market”;

- Mechanisms for adaptable correlation of social and personal needs based on the in-demand occupations maps for medium- and long-term perspectives;

- Forecasting techniques of in-demand occupations in the region for medium- and long-term perspectives; composed lists of in-demand occupations;

- Information analysis system to maintain forecast-oriented career guidance process;

- Methods of career guidance in VET system;

- Guidance documents and regulations to provide the framework implementation in the regional system of vocational education.
LOGIC OF ADAPTABLE CAREER GUIDANCE PROCESS

Person

Medical sciences

School

1st year

3rd year

VET

Last year

Economic demand

- Genetic Therapist
- Biomechanics engineer
- Gerontologist
- Oncologist

Continuous career guidance content update
CONCLUSIONS

• Vocational and personal growth of the individual and the forecast of the regional economy

• Improving the labor market balance due to the timely correction of educational programs

• Other directions:
  • Профориентационный тюнинг
  • lifelong learning in regional universities/colleges
• Petrozavodsk State University (RUSSIA)
  Budget monitoring center
